

The Romulator 9000

Licensing Brief

What It Is

The Romulator 9000 is a ROM-first context persistence architecture for multi-session AI agents.

The Problem: Every AI agent session starts cold. The agent re-reads memory files, re-runs diagnostics, re-ingests architecture - burning 15-25% of its context window just re-establishing what it already knew last session.

The Romulator carries the paint can. Pre-loaded, structured, deterministic context that travels with the agent.

What Makes It Novel

No existing AI framework does this deterministically.

Current Approach	How It Works	The Problem
RAG	Agent ASKS for context from vector store	Reactive. Misses what it does not know to ask.
Memory files	Agent reads flat file at session start	Static. Grows stale. No verification.
Tool-based lookup	Agent calls tools to fetch on demand	Expensive. 15%+ of context bootstrapping.
Fine-tuning	Baked into model weights/prompt	Inflexible. Cannot update between sessions.
ROMULATOR	Pre-loaded + triple-verified	None. Context ready before first token.

Triple-Redundant Verification (Scramblers A/B/C):

Scrambler A (Ledger): Checks what SHOULD exist. Scrambler B (Ground Truth): Checks what ACTUALLY exists. Scrambler C (Arbiter): Resolves disagreements, self-heals. 9 verification paths total.

Proven at Scale

Six months production (Oct 9 2025 - Apr 12 2026):

Metric	Count
Knight (Cursor) code sessions	419
Bishop (Claude) architecture sessions	102
Pawn (Perplexity) research sessions	69+
Innovations tracked deterministically	2,263
Patent provisionals filed	13
Crown Jewels (no prior art)	222

Licensing Targets

Company	Product	Pain Point
Microsoft	Copilot, Azure AI Agents	Enterprise agents forget context between sessions
Anthropic	Claude Code, Claude agents	Sessions start cold, re-read everything
Google	Gemini agents, Vertex AI	Agents lose coherence over days/weeks
OpenAI	GPT agents, Assistants API	Memory is flat and unverified
Salesforce	Einstein agents	Customer context lost between sessions

Licensing Model

Option A - Per-Session: \$0.01-0.05/session. At 1M sessions/day = \$7.3M/year per customer.

Option B - Enterprise: \$50K-\$1M+/year tiered by agent fleet size.

Option C - Platform Integration: Built into SDK. Revenue share + patent license.

IP Protection

Patent Provisional App 64/036,646 (filed Apr 12 2026). Innovation #2263 (CJ #222). Cooperative Defensive Patent Pledge (#2260). Conversion deadline Nov 26 2026.

AI agent market projected \$47B+ by 2030. Context persistence is the #1 unsolved problem. The Romulator is the structural solution.

Liana Banyan - What We Built

Jonathan Jones, Founder and General Manager | April 12, 2026

Things They Said Cannot Be Done

Who Says It	What They Say	What We Built
Warren Buffett	Never invest in what you cannot understand. 2,263 innovations in a complex system.	AI to address the complex deterministic memory. Removed the human memory limit.
Cory Doctorow	Every platform degrades. Enshittification is inevitable.	Cost+20% locked in bylaws. One-Way Valve. 83.3% keep is structural. Removed the ability to deplatform.
The SEC	Cooperative tokens are securities.	Five legal analyses. NOT securities under Forman doctrine. Four-layer structural defense.
Platform Economics	Cannot run without VC, ads, or data harvesting.	\$5/yr. Cost+20%. Zero PII. No ads. No VC. My own money.
Currency Theory	Multiple currencies collapse via arbitrage.	Three-Gear Currency. Marks one-way ratchet. WIR Bank proven 92 years.
Cooperative Skeptics	Cooperatives cannot scale past local.	The 300: Crowns + Board + Captains. ADAPT Score. Structural governance.
AI Skeptics	AI cannot maintain multi-month projects.	419 sessions. 13 provisionals. 2,263 innovations. Triple-redundant verification.
Patent System	Solo inventors cannot file meaningful portfolios.	13 provisionals at ~\$155 each. 2,412 claims. Two firms retained.

The Numbers - Right Now

What	Count	What	Count
Innovations	2,263	Creator keeps	83.3%
Crown Jewels	222	Membership cost	\$5/year
Patent provisionals	13	VC taken	\$0
Formal claims	~2,412	Ads	0
Production systems	36	User data collected	0
Publications	~260	AI to 13th patent	6 months
Glass Door letters	95	Portal surfaces	10

What Happens Next

This week: Scholz letter (Platform Cooperativism). Doctorow letter (enshittification). 95 Glass Door letters go public.

This month: Yale AI Symposium Apr 28. INDL-NA Apr 29. INDL-9 Geneva deadline Apr 30.

This year: PCC Bangkok Nov. Patent conversion Nov 26. Romulator licensing.

Patent portfolio: 2,412 claims across 14 domains. Comparable IP in cooperative platform technology does not exist.

This is not a pitch deck. The platform is live. Every session logged. Every claim verifiable. The proof is running.
