

The Romulator 9000

Licensing Brief

What It Is

ROM-first context persistence for multi-session AI agents. Every AI session starts cold - burning 15-25% of compute re-loading context. The Romulator carries the paint can. Context is pre-loaded and triple-verified before the first token.

What Makes It Novel

Approach	How It Works	Problem
RAG	Agent asks for context	Reactive. Misses unknowns.
Memory files	Reads flat file at start	Static. No verification.
Tool lookup	Calls tools on demand	15%+ context wasted bootstrapping.
Fine-tuning	Baked into weights	Cannot update between sessions.
ROMULATOR	Pre-loaded + triple-verified	None. Ready before first token.

Triple-Redundant: Scrambler A (Ledger - what should exist) + B (Ground Truth - what does exist) + C (Arbiter - resolves conflicts). 9 verification paths.

Proven: 6 Months Production

Metric	Count
Knight code sessions	419
Bishop architecture sessions	102
Innovations tracked	2,263
Patents filed	13
Crown Jewels (no prior art)	222

Licensing Targets + Model

Company	Product	Annual Savings
Microsoft	Copilot, Azure AI	~\$73M
Google	Gemini, Vertex AI	~\$110M
Meta	AI across all apps	~\$365M
OpenAI	ChatGPT + API	~\$146M

Anthropic	Claude agents	~\$36M
Enterprise (all others)	Internal AI agents	~\$730M
TOTAL		~\$1.46 BILLION

License at 1-5% of savings = **\$14.6M - \$73M/year**. Cost to adopter is near zero vs savings. 100:1 ROI. No CFO says no.

IP: App 64/036,646 (filed Apr 12 2026). CJ #222. Cooperative Defensive Patent Pledge. Conversion deadline Nov 26 2026.

Liana Banyan - What We Built

Jonathan Jones, Founder and General Manager | April 12, 2026

Things They Said Cannot Be Done

Who	What They Say	What We Built
Warren Buffett	Too complex for one person to understand.	AI holds it all in deterministic memory. Removed the limit.
Cory Doctorow	Enshittification is inevitable.	Cost+20% locked in bylaws. Removed the ability to change the deal.
The SEC	Cooperative tokens are securities.	Five legal analyses. NOT securities. Four-layer structural defense.
Platform Economics	Need VC, ads, or data harvesting.	\$5/yr. Zero PII. No ads. No VC. My own money.
Currency Theory	Multiple currencies collapse.	Three-Gear Currency. One-way ratchet. WIR Bank: 92 years.
Cooperative Skeptics	Cannot scale past local.	The 300. ADAPT Score. Structural governance.
AI Skeptics	AI cannot maintain long projects.	419 sessions. 13 patents. 2,263 innovations. Zero drift.
Patent System	Solo inventors cannot file portfolios.	13 provisionals at ~\$155 each. 2,412 claims.

The Romulator 9000 - What It Is Worth

Every AI agent session wastes **15-25% of compute** re-loading context. Across all major AI companies, that is **~\$1.46 BILLION per year wasted**. The Romulator eliminates it. License cost to them: almost nothing vs what it saves. **100:1 return**.

Why they adopt IMMEDIATELY: If Google licenses it and Microsoft does not, Google is 20% more efficient. No company can afford that gap. Adoption is competitive survival.

What the Family Sees

Founder IP allocation: 20%. Half to Herjavec: 10% to the Founder.

Scenario	License Revenue	Founder 10%	Monthly to Family
Conservative (1%)	\$14.6M/year	\$1.46M/year	~\$121,700/mo
Moderate (3%)	\$43.8M/year	\$4.38M/year	~\$365,000/mo
Aggressive (5%)	\$73M/year	\$7.3M/year	~\$608,300/mo

And the Romulator is **ONE** innovation out of 2,263. There are 222 Crown Jewels. Each one is a potential licensing target.

The Herjavec Deal

\$5M ask for half of Founder 20% IP slice, 20 years, for Upekrithen LLC. Even at conservative: $\$1.46\text{M/yr} \times 20 = \29.2M return on \$5M. A 5.8x return. The value exists whether Herjavec bites or not.

The Numbers

What	Count	What	Count
Innovations	2,263	Creator keeps	83.3%
Crown Jewels	222	Membership	\$5/year
Patents filed	13	VC taken	\$0
Claims	~2,412	Ads	0
Production systems	36	Data collected	0
Publications	~260	AI to 13 patents	6 months

This is not a pitch deck. The platform is live. The proof is running. Thirteen patents filed this morning.
